INNOVATION FOR SUSTAINABLE FOOD SYSTEMS: SHAPING THE FUTURE OF NUTRITION AND HEALTH

Tuesday May 13th

The first day will feature conferences on funding opportunities for innovation in sustainable food systems. The use of digital tools and biotechnologies throughout the food value chain will be explored. Interactive thematic sessions will be proposed.

Wednesday May 14th

The second day will include conferences on emerging technologies for valorisation of by-products and their application for a scaled-up production. A conference on innovation in sustainable food systems and a cultural visit to the city of Namur are planned.

Thursday May 15th

The final day will be devoted to thematic visits in Wallonia. Several Walloon research centres and universities will open their doors to share their expertise and showcase their facilities.

This three-day programme combines conferences, interactive sessions, themed and cultural tours as well as networking opportunities. Participants will have the chance to meet with scientific experts from the food sector and visit cutting-edge facilities. Come and join us!
